

Solution Requirements

Date	29 September 2026
Team ID	SWUID2026318872
Project Name	A CRM Application for the Chai Shop&Co
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Chai Shop staff will log in to Salesforce using their unique username and password with *Multi-Factor Authentication (MFA)* enforced (via Salesforce Authenticator or TOTP app). Any external app or website will access Salesforce data securely through a *Connected App using OAuth 2.0* with a dedicated integration user.</i>	High
2	Authorization levels	Owner/Admin: Full access to all objects (Orders, Customers, Inventory, Reports), can manage users, roles. Manager: Create/edit orders, view reports, manage inventory and customers; no access to user management	High
3	External interfaces	<i>The Chai Shop system will integrate with: Payment gateway API (e.g., Razorpay/Paytm) for online</i>	High

		<i>orders and UPI payments. SMS/WhatsApp API (e.g., Twilio/Gupshup) to send order confirmations and offers.</i>	
4	Transactions processing	<i>Online orders will be created via an external website/app and synced to Salesforce using a *Connected App + OAuth 2.0; payment status updated via **payment gateway webhook* (Razorpay/Paytm). - Walk-in orders will be created directly in Salesforce by Cashier/Staff; UPI/cash payment recorded against the Order.</i>	High
5	Reporting	<i>Daily sales report by product, payment mode, and staff. - Weekly/monthly revenue, top-selling items, and customer repeat-rate dashboards for Owner/Manager.</i>	Medium
6	Business rules, etc.	<i>Every order must have a customer (walk-in or online), at least one product, payment status, and order status (Pending → Prepared → Delivered/Cancelled).</i>	High
7	Compliance to laws or regulations	<i>System will store FSSAI license number and expiry; reminders sent 30 days before expiry. - Customer data (name, phone, address) will be stored securely, accessed only by authorized roles, and not shared externally except for delivery/payment.</i>	Medium
8	Other	<i>Every order must have a customer (walk-in or online), at least one product, payment status, and order status (Pending → Prepared → Delivered/Cancelled).</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	<i>Common actions (create order, update status, view daily sales) should complete within *2–3 seconds* under normal load. Reports and dashboards may take longer but should not block order entry.</i>	<i>90% of key transactions* (create order, update status, record payment) complete in *≤ 3 seconds;</i>
2	Scalability	<i>The system should support growth from a single outlet to *3–5 outlets* and handle increasing orders, customers, and products without major redesign. Salesforce's multi-tenant architecture and standard limits will be used; custom objects and automation designed to avoid hard-coded limits.</i>	<i>Support up to *5 outlets, **50+ concurrent users, and **10,000+ order records* without performance degradation or major redesign.</i>
3	Security & Data Privacy	<i>All data will be protected using Salesforce's built-in *encryption in transit (TLS 1.2+)* and *encryption at rest; sensitive fields (e.g., customer phone, payment refs)</i>	<i>*100% of users* enforced with *MFA; **0 critical/high vulnerabilities* in periodic security reviews;</i>
4	Reliability & Availability	<i>The Chai Shop system will rely on *Salesforce's standard uptime SLA; critical operations (order creation, payment update) must work during business hours with minimal downtime. No custom hosting; fault tolerance depends on Salesforce platform reliability and regular org backups</i>	<i>Achieve *≥ 99.5% uptime* during business hours (e.g., 7 AM–11 PM), leveraging Salesforce's platform SLA;</i>
5	Usability & Accessibility	<i>Staff will use *Salesforce Lightning UI* on desktop/mobile; screens must be simple, with clear labels, minimal clicks to create an order, and readable fonts/colors.</i>	<i>New staff can create their first order within *5 minutes* of training; key screens usable with *keyboard only*</i>
6	Other	<i>Maintainability, Portability) Configuration (fields, flows, permission sets) will be documented and, where possible, deployed via *Change Sets or unlocked packages* to make future updates and environment moves easier.</i>	<i>All customizations documented; new admin can understand data model and key flows within *1 day;</i>
