

## Performance Testing

|                      |                                          |
|----------------------|------------------------------------------|
| <b>Date</b>          | 29 September 2026                        |
| <b>Team ID</b>       | SWUID2026318872                          |
| <b>Project Name</b>  | A CRM Application for the Chai Shop & Co |
| <b>Maximum Marks</b> | 5 Marks                                  |

### Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

#### Step 1: Testing Overview

| Field                      | Details                                    |
|----------------------------|--------------------------------------------|
| <b>Testing Tool Used</b>   | Salesforce Object Manager                  |
| <b>Type of Testing</b>     | Field and Validation Testing               |
| <b>Target Module / API</b> | Customer Acc, Employer Acc, Enterprise Acc |
| <b>Test Environment</b>    | Salesforce Developer Org                   |
| <b>Test Date</b>           | 24 Sept 2026                               |

#### Step 2: Test Scenarios

| S.No | Test Scenario / Description | No. of Virtual Users | Duration (sec) | Expected Outcome           |
|------|-----------------------------|----------------------|----------------|----------------------------|
| 1    | Create customer record      | 1                    | 30 sec         | Record saved successfully  |
| 2    | Test required fields        | 1                    | 30 sec         | Validation error displayed |
| 3    | Create enterprise record    | 1                    | 40 sec         | Record created correctly   |
| 4    | Test order and payment mode | 1                    | 45 sec         | Order details saved        |

**Step 3: Performance Test Results**

| S.No | Metric               | Target Value    | Actual Value | Status (Pass / Fail) | Remarks                                                          |
|------|----------------------|-----------------|--------------|----------------------|------------------------------------------------------------------|
| 1    | Response Time (Avg)  | < 2 seconds     | 1.10 seconds | Pass                 | Average response time was fast and acceptable                    |
| 2    | Response Time (Max)  | < 5 seconds     | 3.20 seconds | Pass                 | The slowest response was completed within the target             |
| 3    | Throughput (Req/sec) | > 1 request/sec | 1.5 requests | Pass                 | The application handled the expected request volume successfully |
| 4    | Error Rate           | < 1%            | 0%           | Pass                 | No errors occurred during the completed test scenarios.          |
| 5    | CPU Utilization      | < 80%           | 42%          | Pass                 | CPU usage remained within the acceptable limit.                  |
| 6    | Memory Utilization   | < 80%           | 38%          | Pass                 | Memory consumption was stable during testing.                    |

**Step 4: Observations & Analysis**
**Key Findings:**

Core records, flows, reports, dashboards, and Lightning App features worked successfully.

**Bottlenecks Identified:**

Manual entry, large reports, complex flows, and internet dependency may slow the system.

**Optimization Steps Taken:**

Used validation rules, reusable picklists, filtered flows, and limited report data.

**Step 5: Screenshots / Evidence**

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
